There are two main types of options: calls and puts. A call option gives the buyer the right to buy the underlying asset at a specified price. A put option gives the buyer the right to sell the underlying asset at a specified price.

Options are traded on exchanges, just like stocks and bonds. When you buy an option, you are buying the right to buy or sell the underlying asset at a specified price. You do not have to exercise this right, but you can if you think it is profitable to do so.

## **The Risks of Options Trading**

Options trading can be a very risky investment strategy. There are a number of factors that can affect the value of an option, including the price of the underlying asset, the time to expiration, and the volatility of the underlying asset.
